

HEAVY-DUTY WHOLE HOUSE WATER FILTER

FEATURES:

1. Removes sediment, rust, chlorine, odor, bad taste
2. High-Flow with minimal pressure drop, 3/4" inlet
3. Unit Dimensions: 7" x 13"
4. Heavy-duty reinforced FDA grade polypropylene
5. 20,000- 50,000 gallon capacity (replace every 6 to 12 months)

BENEFITS:

1. Reduces cloudy water caused by sediment
2. Reduces wear on expensive faucets
3. Reduces iron stains caused by suspended iron
4. Reduces staining in sinks, toilets and showers
5. Removes chlorine, odor, and bad taste
6. Eliminates plugged faucet aerators
7. Ideal for homes, farms, wells, restaurants, pools, spas

Replacement Filter:

Big Blue Carbon Block Filter 20K-50K gal., part no. 288
\$30

Replace filter every 6 to 12 months or when pressure drops significantly.

Complete Kit includes:

1. Big Blue Heavy-duty Housing
2. Big Blue Carbon Block filter (20,000 gallons capacity)
3. Heavy-duty mounting bracket
4. Filter Housing Wrench

INSTALLATION:

CAUTION: The manufacturer of the filter housing (sump) recommends changing the sump every 5 years to prevent water leak or stress cracks. Failure to replace the sumps may result in water leaks and may cause water damage.

NOTE: If water main temperature goes down to 40 F, the filter housing may crack due to water expansion or frozen pipe. Take precaution and avoid exposure to near freezing temperature. If water temperature gets to around 40 F, you must temporary shut off the filter and empty the water inside the filter housing.

1. WH-10 is designed to be installed at the water main. You need to be capable of doing plumbing work at the water main, but we highly recommend having a plumber installed this filter.
2. The inlet and outlet of the filter are 3/4" , you need to purchase the appropriate connection fittings yourself.
3. Please refer to the following diagram for connection (must install gate valve 2, valve 3, valve 4)

GATE VALVE POSITION:

1. Using WH-10 to filter water, position of the gate valves are: Valve 1, Valve 3, Valve 4 OPEN, Valve 2 CLOSE
2. Bypass WH-10 filter, positions of the gate valves are: Valve 1, Valve2 OPEN, Valve 3, Valve 4 CLOSE.

PROCEDURE FOR FILTER REPLACEMENT

1. Turn Valve 3, Valve 4 CLOSE, Valve 2 OPEN
2. Press the pressure relief button (red button on top of filter housing) to release pressure.
3. Use filter wrench to open up the housing.
4. Replace Big Blue Carbon Block filter, (part no. 228)
5. Make sure the O-ring is in place.
6. Screw on the filter housing using wrench
7. Turn on gate valve 3 slowly and observe any leaks.
8. If their is leak from housing, redo procedure #3 to #7
